

Why choose HMU Internet Service?

FTTX offers customers flexibility for Internet speed and increased video programming capacity in the future.

In 1995, Harlan joined an elite handful of communities offering a state of the art 750 mhz hybrid fiber coax system. In 2013, we continued our commitment to the most current and robust system as we rolled out fiber to the premise (FTTX).

In 2016 and 2017, more customers received a dedicated fiber connection. FTTX customers have a strand of glass fiber from their premise to our head end ensuring individual distribution with high quality of service.

Someday, most systems will look like ours does today! FTTX is available in a limited areas but more sections of Harlan will be converted in the future.
